What is a green base station solution?

The green base station solution involves base station system architecture, base station form, power saving technologies, and application of green technologies. Using SDR-based architecture and distributed base stations is a different approach to traditional multiband multimode network construction.

Why do we need more information about the Cook Islands?

More reliable information will also support the Cook Islands Port Authority and Cook Islands Airports in the landing of aircrafts and guidance of large sea vessels, as well as transportation to the remote outer islands, vital to delivering essentials including medication, project materials, food, fuel, and

fresh water.

What should a base station do in a wireless communications network?

In a wireless communications network, the base station should maintain high-quality coverage. It should also have the potential for upgrade or evolution. As network traffic increases, power consumption increases proportionally to the number of base stations. However, reducing the number of base stations may degrade network quality.
