## Overview

---

Which countries use 240 volts and 50 Hz?

Europe, most of Asia, Africa, and Australia predominantly use 220-240 V, 50 Hz. Japan is unique in using both 100 V, 50 Hz, and 100 V, 60 Hz, depending on the region. Middle East and parts of Asia show mixed voltages and frequencies, indicated by striped patterns.

Does Europe have 230 volts?

Europe's power grid, the world's most interconnected, is set at 230 volts (an EU standard since 2008). Before that the voltage standard had been 220V (most countries) or 240V (UK and Ireland). It was the Germans who introduced 220V AC power in Europe over 100 years ago.

What is European mains power?

This post is about European mains power. Electricity in EU countries conforms to the European standard, coming out of the wall socket at 230 volts alternating at 50 cycles per second. While the voltage and frequency are fixed, the mains connectors and wiring practices can vary between different countries in Europe.

What voltage is used in Japan?

Japan is unique in using both 100 V, 50 Hz, and 100 V, 60 Hz, depending on the region. Middle East and parts of Asia show mixed voltages and frequencies, indicated by striped patterns. What is the advantages of using 230 V compared to 120 V?

.

What is the mains voltage?

The below table shows the mains voltage by country, which in most incidents is between 220 and 240 volts (50 or 60 Hz) and three-phase between 380 and

415 volts; the table also shows what plug types are used in each country.

Do all countries have a power voltage standard?

As you navigate the table you will notice that the majority of countries have a well-defined power voltage standard, however many African, Asian and South American countries have an array of voltages and plug types which can differ from region to region.
